CANCEROUS ULCERS ROOTED IN THE BLOOD.

After the age of 45 or 50, when the vital powers are naturally weaker, it is noticed that a hurt of any kind heals slowly and often a very insignificant scratch or bruise becomes a bad ulcer or pain or inconvenionee, and I should have forgotsore. At this time of ten about it had it not begun to inflame and itch; it life warty growths, would beed a little, then soab over, but would not moles and pimples that began to eat and spread, until it was as large as a have been on the body to give it a fair trial, and it is remarkable what a almost from birth begin wonderful effect it had from the beginning; the sore to inflame and fester, began to heal and after taking a few bottles disappeared entirely. This was two years ago; there are large eating ulcers.

Whenever a sore or ulcer is slow in healing then you may be sure something is radically wrong with your blood. Some old taint or poison that has been slumbering there for years, is beginning to assert itself, and breaks out and becomes a bad ulcer and perhaps the beginning of Cancer. These old sores are rooted in the blood, and while washes, soaps, salves, etc., keep the surface clean, they are not healing. A blood
